

DOCK App

Future proof bay management activities

An application to gain visibility and effectively manage dock door operations.

Overview of the DOCK App

Our DOCK App helps organisations to effectively manage their inbound and outbound transport across their bays. Symptoms of not having a Dock Management System are bottlenecks, peaks and troughs in workload and lack of visibility of when and which carrier is due in next. In turn, this results in increased cost additions from carriers for waiting times.

Example Customer Problems

“We experience a lot of carrier cost additions from waiting times at our warehouse and would like to reduce them”.

“We have difficulty in planning our resources efficiently due to not knowing when carriers are arriving. This often leads to extreme peaks and troughs in activity”.

“We can’t currently measure our pick or turnaround times which makes it difficult for us to manage our resources efficiently”.

Digital Transport System Solutions

3T’s DOCK App connects you and your carriers giving you both visibility of available booking times and bays. This removes those gatehouse queues and drastically reduces carrier waiting times.

By ensuring work is optimised throughout the day and knowing which carrier is due next, your warehouse and despatch teams can ensure the correct picks are ready at the correct bay. It also ensures their workflow is steady and manageable throughout the day.

3T’s DOCK App enables you to accurately capture turnaround and waiting times resulting in less cost additions. This makes it easier to plan resources and increase efficiency.

DOCK Features

- Bay Management; Singular & Multi-site
- Warehouse bay / shift configuration
- Bay status
- Booking in;
 - Manual booking entry
 - Supplier entry
 - Exworks entry
- Daily summary reports
- Route / Day Manifests
