# **INCAB App**

# **Live tracking and POD smarthphone application**

A smartphone application that provides you with live tracking and EPOD compliance.

## Overview of the INCAB App

Our INCAB App is a downloadable smart-phone application. It has integrated tracking and EPOD functionality to give you visibility of your carrier partners (who can't currently provide you with live tracking), as well your own fleet if you operate one.

#### **Example Customer Problems**

"Some of the hauliers that we use don't provide us with any tracking information. This leaves us and our customers with visibility gaps on deliveries".

"We are wholly reliant on the driver to update us on delays with some of our haulage partners".

"Some of our carrier partners can't provide us POD evidence on the day of delivery and there can be a delay in receiving this. Sometimes we don't get a POD at all and have to chase these which delays payments".

#### **Digital Transport System Solutions**

3T's INCAB App offers instant integration to our ROUTE App and means all your haulier needs to do is download the app. The app then works away in the background to provide you and your customers with live tracking.

3T's INCAB App will detect when the driver is delayed in traffic and automatically update you and your customer on FTA.

3T's INCAB App provides sign on glass EPODs delivered straight back to you. It also allows drivers to log issues and upload photos.

#### **INCAB Benefits**

- Get real-time visibility of your carriers or own fleet.
- Provides carriers without their own tracking systems an easy way to provide live tracking, ETA updates and EPOD's from a mobile device.
- Improved customer service with accurate ETA's.
- Integrated with our INFORM and TRACK my Delivery Apps to provide visibility, ETA and status updates to your customer service teams and customers directly.
- Ability to take photos and attach to EPODs or incident reports.
