# ORDER App

Automated order entry application

An application that can be used to automate the delivery of orders from various formats into your Order Management System.

Overview of the ORDER App

Our ORDER App helps companies to automate the time consuming and error prone process of manually re-keying orders into their ERP or Order Management System.

Some of our clients include:

MACFARLANE PACKAGING   RECTICEL   JCB
SAICA   kp   Kraft Heinz

Example Customer Problems

"Our customer service teams spend too much time on manually re-keying customer orders as opposed to looking after our customers".

"We need to reduce errors on order entry that lead to customers receiving the wrong stock".

"It takes too long to integrate with some of our customers systems".

ORDER Features

• Provides a web portal that can be customer branded to allow one point of entry for all of your orders.

• Standard CSV/XML integration for automation of orders.

• In-house developed rapid mapping tool for faster integration with customers.

• Validation rules to ensure process accuracy and eradicate errors.

Digital Transport System Solutions

3T's ORDER App enables these orders to be delivered automatically.

3T's ORDER App supports business rules to validate your orders and eliminate errors.

Utilising our INTEGRATION App we can rapidly map and integrate your customers own order formats.

Typical ROI per £20 million T/O

• Manual re-keying orders takes up approximately 1 FTE per £20 million of T/O - £25k saving.

• Manual re-keying leads to around 1 in every 100 orders being keyed incorrectly - £10 -£20k pa saving.

• Integration is either outsourced at a cost or drains internal I.T time.
